Solution surface

trenovo product information

Homeline Solution

Homeline Solution by trenovo sets new standards in the field of stair renovation.

Leading national and international flooring manufacturers have been using this innovative surface in their flooring collection for quite some time.

We as a manufacturer follow this market penetrating trend!

Sustainability and healthy building are becoming increasingly important. Thanks to ecological coating Proflex 3D surface covering is free of PVC multi-layer composite, the surface is extremely hard-wearing, robust and easy to clean. Thanks to the multi-layer composite, trenovo step coverings are both elastic and warm to the feet. This increases walking comfort on the stairs, the adjacent corridor areas and ensures quiet and better acoustics in the staircase area. The slipresistant surface provides a pleasant and safe walking feeling. The 3D-effect of the decor gives the surface a deep and distinct decorative sharpness. As a result, it comes very close to natural materials such as wood and cement and looks absolutely authentic.

Authentic surface

High-quality decor has authentic surface structures that cannot be distinguished from natural materials by the naked eye. Even wood grains are imitated naturally. These materials, whether in wood, vinyl, laminate or stone look, immediately outdo the natural alternatives in many ways. On the one hand, through the safety aspect with R10 slip-resistant coating and the solid wood core, which guarantees maximum stability from the inside out. (according to the German Institute for Stair Safety). On the other hand, however, also through the pure look, because the material has no colour interruptions in the area of the front edge.

Solution surface

trenovo product information

healthy living

harmless to health, because free from PVC, chlorine and plasticizers

easy on the joints

thanks to elastic surface

silent

high-quality materials reduce room and impact sound

warm to the feet

pleasantly warm and comfortable for an optimal walk feeling

antistatic

no unpleasant surprises or electrostatic discharges

hard-wearing

because of multi-layer-composite

easy-care

dirt-resistant, easy and quick to clean

Healthy living surface

Healthy nutrition and healthy living have long since arrived in society. We follow and promote this trend with our Solution Program. We use the coating product Proflex 3D, which our partner Schattdecor has developed for low-emission multi-layer modular flooring systems. This means no PVC, no chlorine, no plasticizers – neither for the stairs, nor for the floor or the accessories.

proflex 3D
by Schattdecor

Everything from a single source

All components of the trenovo staircase systems offer you a complete solution with absolutely decorative materials. Matching the system, we manufacture material-identical flooring, large-format decorative panel and various strips. This is the only way we can ensure that everything is from a single source, from the entrance to the stairs to the platform surface to the further floor area.

True to our motto:

Stairs in perfection!

Solution step elements

trenovo product information

Homeline Solution step elements - product range

- steps in 5 lengths / Verschnitt optimiert
- steps in 4 depths / alle Möglichkeiten
- laminate
- laminate skirting
- decorative panels

Whether concrete stairs or wooden stairs, they all lose their beauty and safety due to years of intensive use.

For this reason, it is recommended to renovate your staircase. Ideally suited are our homeline solution step elements, which takes the aspects of beauty, thanks to the decor selection and feel, as well as safety by means of pronounced slip resistance. Thanks to our extensive range, you can redesign spiral, straight and stairs with intermediate platforms. With our 12 exclusive solution decors, you have the opportunity to bring your current living trend to the stairs. Decor-identical accessories such as flooring and decorative panels also give you a variety of applications in the design of the adjacent floodplains.

Solution Block steps

trenovo product information

Homeline Solution block steps - product range

Precisely according to your templates or electronic data, we manufacture the complete steps in an assembly-friendly manner. It does not matter whether it is a straight or a drawn step. Whether corner cut-out or rounding. All components are ready for assembly, from the staircase entrance to the landing to the stair exit.

For a long time, the staircase was only a functional object and served as a connection between two or more floors. This has changed drastically in the meantime. Whether new construction or after renovation, the staircase plays an important role in interior design. The staircase is the calling card of her house. Often it is the first thing you see when you enter the property and the last thing you see when you leave it. Thus, the staircase is of particular importance.

These steps are produced in the usual “trenovo homeline” quality with authentic surfaces according to your specifications. This allows you to adapt the stairs to their individual ideas and the current living ambience.

Block steps made of wood are simply more beautiful, more ecological and, above all, healthy to live with.

Stepline and a variety of options

Decorative identical flooring, large-format decorative panels and moldings will help you realize your living dreams.

Exact fit according to your specifications (DXF/DWG -file or template), we produce different step formats easy to assemble.

Upon request, we can install a high-quality aluminum keder in the step. Especially with the dark decors, this adds to a better perception and optical separation.

Staircase system - Solution block steps

Uncompromisingly good ...

Besides quality, two points are of major importance to us!

Optics/Design :

- An absolutely authentic-looking surface sets standards through brilliant decor depth and haptics.
- From the tread to the front edge up to the underside, all steps have a continuous surface.
- The shapely and secure leading layout design fits into the design concept of the staircase.
- Edges on the sides in end-grain look provide a perfect finish.

Safety :

- safe and pleasant use due to a 6 mm radius at the front edge of the step
- continuous, full-surface slip resistance R9/R10
- increased resistance to breaking due to solid natural wood core, total thickness 45 mm
- prevents unpleasant creaking with inserted mortised stringer staircase

Advantages of a block board

- Sustainability
- Low weight with high dimensional stability
- Enormous bending resistanc
- Good Stamina
- High loadbearing capability
- Screw strength

More climate protection thanks to sustainable timber construction

In sustainable construction with wood, spruce from sustainable forestry is primarily used. In Germany, the principle of sustainable forestry is practiced so maturely that the forests in this country continue to grow every year. The average annual use of wood is around 76 million cubic metres of raw wood, while the forest stock grows back by around 120 million cubic metres of wood every year. Thus, more wood remains in the forests than is felled.

Structure of a block board

Rod or rod plywood board (according to DIN 68705-2) are also called block board. The block board is also referred to as rod plywood. Block boards have the advantage of stiffness and dimensional stability. They have a low weight and a high stamina. The middle layers are usually made of light European wood species such as .B spruce or fir.

Depending on the intended use, different designs can be used as a top layer.

3-fold structure

The bulk density of a wood-based material is the ratio of the mass to its volume, and thus representative of its weight. This key figure is the most important indicator of the properties of a material and therefore enormously important for consumers/processors. MDF carries 3-fold of the weight, the chipboard 2-fold and the block board's top up to 135-fold its own weight! Thus, our block board has a significant increase in stability despite the significantly lower weight!

Healthy living

How much glue is used for the production of a wood-based panel is an indicator of the risk of environmental pollution. The block board shows the lowest glue content and thus the best environmental compatibility. The proportion of solid, living wood is therefore significantly higher – and the proportion of added chemicals is all the lower!

Laminate step elements

trenovo impressions

Homeline Laminate

The system offers you a wide range of options.

For over two decades, we have been using this layer material to produce decorative stair elements. As it is standard practice at trenovo, all the articles belonging to the laminate system are also identical in terms of decor.

This is the only way we can ensure that from the start of the staircase through the landing up to the stair tread, everything is from one cast. Of course, this also includes the floor for the adjoining corridor. As with all Trenovo systems, we reduce the risk of falls on stairs with a slip resistance of R10. This is how Trenovo thanks to ensures safety on stairs!

Thanks to the 3D depth structure, Trenovo contributes to safety on stairs!

No matter which decor you choose, both structures provide a pleasant, matte surface. Due to the respective embossing, they appear very authentic and are modern at the same time.

trenovo Accessories

U-profile 8/68 and 8/83

You can use U-profiles to give open staircases a finish that's identical to the décor at the back, but these strips can also be used to cover strings in no time at all.

Size: 8 x 68 x 2700 mm

Size: 8 x 83 x 2700 mm

Side panel/ brainwood side panel

The side panel with precision milled grooves can be used on both sides - the perfect solution for the side closure of the open step. For the cut edge of the risers of the risers use the WL 8 x 20

Size: 10 x 70 x 500 mm

AFL 19 / 60

The ideal solution for landing or areas in which you are laying laminate floors with an identical décor to the staircase. The understated, high-quality look gives you an attractive wall termination.

Size: 19 x 60 x 2700 mm

Stringboard (MDF)

An ideal solution for covering the string using a stringboard identical to the décor. Highly abrasion-resistant, scratch-resistant and wear-resistant, to give you an attractive solution that keeps its value.

Size: 8 x 410 x 2800 mm

LED strip 22 /45

Identical to the angle strip 22 /45 in terms of profile, this strip delivers a decisive advantage: using the pre-made milling groove enables the LED staircase lightning to be integrated so that it cannot be seen.

Size: 22 x 45 x 1350 mm

Wiping strip / wall strip

(with surrounding matching ABS edge strip)

This product is available in all our homeline decors. With the trenovo wiping and wall strip you get a perfect wall finish. From the 200 x 700 format cut 2 wiping strips.

Size: 8 x 200 x 700 mm

First step

A perfectly finished first step is an eye catcher and at the same time extremely difficult to achieve. The precise prefabricated elements give you a high-quality and elegant appearance.

Size: Pentagonal 350 x 160 x 200 mm

Design-front edge Solution

Corner fillet 8 /20

The "small" corner fillet is the ideal solution to cover lateral cutting edges and open stairs.

Size: 8 x 20 x 2700 mm

Corner fillet 22 / 45

Corner fillet for the step bottom and installation aid. Perfectly prepared staircase elements allow a precise installation of the corner fillet 22/45.

Size: 22 x 45 x 2700 mm

Corner fillet 8/100

Our „big one“ covers pretty much everything. Whether it is the cheek or unsightly concrete chips. This product gives you many options.

Size: 8 x 100 x 2700 mm

Trend-front edge
laminate

Accessories

Trenovo flooring:

Whether it is our laminate or our Solution collection, trenovo offers the 100% structure and decor identical flooring for all Homeline decors. This is the only way to ensure that the connection from the stairs to the adjacent corridor appears as if it is all of a piece. We manufacture our floors with the patented and easy to install Uniclic-system.

Trenovo insulating underlay:

This high-quality underlay provides an excellent reduction of walking and footfall sound. The integrated steam brake provides additional protection.

Decorative mouldings:

Our skirting board corners do not only look decorative, they also ensure a permanently beautiful appearance. Especially an outside corner would quickly lose its charm without the protection of the cap due to the inevitable bumps with the vacuum cleaner. The cap's plug-in system eliminates the time-consuming mitre cut.

Suitable LED light system:

Light is an essential design element that can be wonderfully integrated into any staircase. Whether in wall or the step, the trenovo lighting system creates atmosphere and safety.

Step transition profile:

With a height offset of up to 8 mm in the area of the staircase exit and the adjacent corridor area, the profile ensures a smooth transition.

Floor end profile:

This profile is used in case of a missing exit step of existing block staircases. This creates a decorative finish of the decor-identical flooring to the parapet.

Mounting tape including spacer:

This building authority approved adhesive tape simplifies the assembly of the block steps. Time-consuming drilling and screwing is not necessary. The spacers ensure a constant, uniform step support.

Take advantage as a manufacturer of decorative interior finishing products!

To realize your ideas and projects, we offer you a spectrum of technical possibilities and customised solutions.

One for all...
Our solution-interface for many applications.

True to our motto:
Stairs in perfection!

Decor: Solution Concrete grey PRO

A perfect interaction of all possibilities. Minimalist and elegant, the modern folding staircase.

Decor: Solution Tyrol Oak / brainwood side panel

A side finish for open steps that is worth seeing!

Company

Michael Rennkamp

Heinz Kottmann

Grown from our many years of experience

Trenovo Treppensysteme e.K., is based on the 50-year history of BHK. 20 years ago, BHK first developed a staircase profile based on laminate flooring, which can still be found today in a slightly modified form in wide-area marketing. 10 years ago, the wrapped stair step was developed as a trenovo stair renovation system for the renovation specialist companies. Our systems are industrially produced at the Büren site and sold nationally and internationally.

The trenovo system is the complete solution for new constructions and renovations. Its professionalism is not only shown in the surfaces. For you as a customer the trenovo system offers best material quality, short ways of communication, flexible reaction times and a perfected logistic.

Environment

At trenovo we feel obligated as both people and as a company to do everything we can to preserve our resources and protect our environment. The trenovo staircase system and all other products are produced with great care and responsibility towards nature. In selecting materials we make sure that they are natural, demonstrate high quality and are manufactured in an environmentally sustainable manner. We use only wood materials that are sourced from sustainable forestry. This is demonstrated by the PEFC certificate. PEFC certified materials can be ordered on request. Our basic values are part of our system. For this reason, compliance with environmental guidelines, product quality and work safety in our facilities are audited at regular intervals. Since the year 2000 we have been certified in accordance with ISO 9001 and ISO 50001. We burn wood and paper waste in our own power plant and use the power generated for our heat and electrical power supply.
